

CANYON CREEK COWHIDE

PRODUCT CHARACTERISTIC SHEET

PRODUCT DESCRIPTION:

Canyon Creek Cowhide is a Finished leather that is aniline-dyed and has a water-washed, weatherworn, and carefully distressed look that highlights each hide's unique history and natural markings.

CHARACTERISTICS:

The leather receives a pigmented finish then is machine-sprayed with an antique effect to create a two-tone coloration.

Being a natural product, Canyon Creek will exhibit some natural characteristics such as healed scars, veins, neck wrinkles, and grain variation throughout a hide and from hide to hide.

A sample of Canyon Creek Cowhide is not necessarily representative of the overall coloration, effect, and characteristics of the entire hide.

A: Permanent natural creases on the hide caused by fat deposits in the live animal usually found in the neck, shoulder, and belly area.

B: Canyon Creek Cowhide is a machine-sprayed antiqued leather; there will be variation in coloration and boldness of the antiquing effect within a hide and from hide to hide.

C: Healed wound during life of animal which is characterized by raised surface and inconsistent grain. Scars are less apparent on Canyon Creek product than on Aniline leathers.

D: Loose grain is characterized by large "breaks" in the density of the grain visible on the surface of the hide. Generally-speaking, loose grain is often found towards the perimeter of a hide.

E: Characteristic wherein the grain structure visible on the surface of the hide is more uniform and "tight." Tight grain is generally preferred and found more consistently towards the interior of the hide.
