

SHIMMERING SUEDE COLLECTION

MARBLE SUEDE

PRODUCT CHARACTERISTIC SHEET

PRODUCT DESCRIPTION:

Marble Suede is genuine split suede that has been aniline-dyed and has received various colored foil transfers to create its final look. The multi-dimensional and random foil transfer creates a "pattern" that resembles the look of genuine marble on leather.

CHARACTERISTICS:

Natural variations in color, tone and texture are part of the beauty of this leather artwork and highlight each skin's unique history and natural markings. The pattern has been imparted by a foil transfer.

As an Aniline leather, natural variations in color and tone are part of the beauty of this natural leather and highlight each skin's unique history and natural markings.

These are small skins, averaging 18 - 22 SF in size.

COLOR VARIATION

A: Marble Suede is an Aniline leather, with no surface pigments; there will be natural color shading within a skin and from skin to skin.

DEFECTS

B: Marble Suede defects may include natural characteristics such as small holes, crease lines, and discoloration spots. These defects are minimal but should be expected to some degree as this is a natural product.

STANDARD COWHIDE

SUEDE DOUBLE BUTT

Many patterns and styles are available, see www.townsendleather.com and search for Shimmering Suede for current selections.
