

NUBUCK EMBOSSSED COWHIDE PANELS

PRODUCT CHARACTERISTIC SHEET

A: Permanent natural creases on the hide caused by fat deposits in the live animal usually found in the neck, shoulder, and belly area.

**NECK/FAT
WRINKLES**

PRODUCT DESCRIPTION:

Nubuck Embossed Cowhide is an Aniline leather. It is made on our most select hides and is embossed with a pebbled grain that enhances the natural grain of this lightly-buffed, softly-sueded premium cowhide, helping to create a more consistent grain throughout the hide.

Produced as pre-cut panels.

CHARACTERISTICS:

As a full-Aniline leather, Nubuck Embossed does not have the coverage of a pigmented formula as a Finished leather does; there will be natural variations in grain texture and in color shading within a panel and from panel to panel.

Each hide's natural markings will be highlighted. The appearance of natural markings such as the backbone, healed scars, and neck and fat wrinkles are to be expected. This is a very natural leather; the leather itself has only been minimally altered from its natural state.

Because of its inherent characteristics, this product should be ordered in panels only and the inherent qualities should be well understood by the end user.

B: Characterized by large variation in the density of the grain visible on the surface of the hide.

LOOSE GRAIN

C: Inconsistent grain found in the center of the hide running along the entire length of the hide.

**VISIBLE
BACKBONE**

D: Healed wound during life of animal which is characterized by raised surface and inconsistent grain.

SCARS

E: Characterized by many clearly visible blood vessels, either closed or cut open by splitting or shaving operations.

VEINS

F: Irregular color shades found within hides and/or within a panel characterized by raised surface and inconsistent grain.
